

# Materials Compatibility List

Chemicals for processing endoscopes  
and endoscopic instruments

**STORZ**  
KARL STORZ — ENDOSCOPE

---

## Materials Compatibility List

### Preface

Hygiene is a fundamental component of the entire health care process and, therefore, requires a high degree of professional competence and responsibility. The goal must be to provide suitable procedures for cleaning, disinfection, and sterilization that can be implemented in the daily routine and that take all valid standards and regulations for each individual instrument into consideration.

The focus is on:

- Legal and regulatory requirements for reprocessing medical products
- The safety of patients, users and third parties
- Lowering the status of contamination to unavoidable residual risks

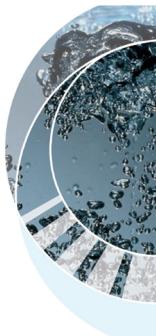

The KARL STORZ material compatibility list is your guide for the reprocessing of rigid and flexible endoscopes as well as endoscopic instruments and provides the best possible value preservation of your investments. The chemicals listed here have been tested and approved by KARL STORZ with regard to material compatibility.

A differentiation is made between manual cleaning and disinfection/ultrasonic cleaning and machine cleaning and disinfection for which various chemical agents are used. Material compatibility approval is based on tests on various processing chemicals. Therefore, any possible chemical cross-reactions due to insufficient neutralization/rinsing between process steps or incorrect dosage/exposure time can not be ruled out. This particularly applies to subsequent low-temperature sterilization as this process also uses chemical agents.

To ensure efficacious reprocessing conforming to legal and statutory requirements, please observe user manuals for each specific product and the detailed user manual "Cleaning, Disinfection, Care and Sterilization of KARL STORZ Instruments".

## Table of Contents

## Materials Compatibility List

# 1. Manual cleaning and disinfection / ultrasonic cleaning

The substances listed here have been approved and tested by KARL STORZ with regard to material compatibility. This list is not a statement concerning the microbiological effectiveness of the products.

The following KARL STORZ instruments are **not suitable** for **ultrasonic cleaning**:

- Rigid telescopes
- Flexible and semiflexible fiberscopes
- Other instruments with optical components made of glass, with chips, or with electronic components

## 1.1 General warnings

### **Warning:**

During all cleaning and disinfection procedures on contaminated instruments, please observe the occupational safety guidelines of the employers' liability insurance association (Berufsgenossenschaft) or equivalent organization.

### **Warning:**

Gigasept FF from the chemical manufacturer Schülke & Mayr GmbH at a concentration of 8% and a contact time of 60 minutes is not approved for fiberscopes.

### **Warning:**

In the case of flexible endoscopes, first vent and then remove the leakage tester so that the pressure compensation valve closes again.

### **Warning:**

In the case of flexible endoscopes, the pressure compensation cap must be removed from the vent connection during liquid immersion / chemical disinfection.

### **Caution:**

Please follow the instructions "Cleaning, Disinfection, Care and Sterilization of KARL STORZ Instruments." These provide a detailed description of cleaning, disinfection, and sterilization procedures.

### **Caution:**

To minimize stress on materials, avoid repeated switching between processing procedures.

### **Caution:**

**Damage to materials:** Cleaning the outer sheath of flexible fiberscopes with ammonium chlorides will damage the material, particularly at the hose nozzle.

**Caution:**

Cleaning all of the materials with alcohol-based cleaning agents can lead to damage to the products as well as contamination becoming fixed to the surface of the products.

**Caution:**

Please note that when preparing and using the solutions, **the chemical manufacturers' instructions on concentration and contact time must be strictly followed**. Excessively long immersion or incorrect concentrations may cause damage. Please contact the chemical manufacturer regarding microbiological effectiveness.

**Caution:**

Using SODIUM HYDROXIDE SOLUTION may lead to surface alterations in aluminum parts (even if coated), plastics, and soldered joints, and it may reduce the service life of the instruments.

**Caution:**

Before placing the flexible endoscope in the solution, check leak tightness since any liquid penetration may cause damage.

**Caution:**

Regardless of the selected cleaning and disinfection procedure, flexible endoscopes should not be heated to temperatures **above 60 °C**.

**Caution:**

Endoscopes should not be cleaned in an ultrasound bath.

**Caution:**

The use of rinse aids is not approved for plastics. Rinse aids have a negative effect on plasticizers, which may lead to breakage.

**Note:**

National laws and regulations must be observed.

In the case of semi-critical medical devices that are used in a non-sterile condition, disinfectants with full virucidal efficacy should be used.

**Note:**

The C-MAC® video laryngoscope series (840XXX) is considered to be a video endoscope.

**Note:**

For detailed information on processing, please refer to the respective instructions for use.

**Note:**

Please contact the chemical manufacturer regarding the range of action of the chemical agents used.

## Materials Compatibility List

### 1.2 KARL STORZ has tested material compatibility and approved the following agents:

Cleaning agents that are marked with\*: These cleaning agents are proven to be effective against prions

If agents other than those listed above have been used, any arising damage is not covered by KARL STORZ.

## Materials Compatibility List

## 2. Machine cleaning and disinfection

Select telescope cleaning and disinfection procedures in consultation with the manufacturers of the machine and the chemicals. Only use special processes that have been validated for this purpose. Please contact the manufacturer of the processing chemicals regarding microbiological effectiveness.

### 2.1 General warnings

**Warning:**

During all cleaning and disinfection procedures on contaminated instruments, please observe the occupational safety guidelines of the employers' liability insurance association (Berufsgenossenschaft) or equivalent organization.

**Caution:**

Please follow the instructions "Cleaning, Disinfection, Care and Sterilization of KARL STORZ Instruments." These provide a detailed description of cleaning, disinfection, and sterilization procedures.

**Caution:**

To minimize stress on materials, avoid repeated switching between processing procedures.

**Caution:**

Flexible endoscopes should never be steam sterilized (autoclaved).

**Caution:**

The pressure compensation cap must be removed from the vent connection during liquid immersion / chemical disinfection.

**Caution:**

Please note that when preparing and using the solutions, **the chemical manufacturers' instructions on concentration and contact time must be strictly followed**. Excessively long immersion or incorrect concentrations may cause damage. Please contact the chemical manufacturer regarding microbiological effectiveness.

**Caution:**

Regardless of the selected cleaning and disinfection procedure, flexible endoscopes should not be heated to temperatures **above 60 °C**.

**Caution:**

The use of rinse aids is not approved for plastics. Rinse aids have a negative effect on plasticizers, which may lead to breakage.

**Caution:**

The product thermosept RKF forte from Schülke & Mayr GmbH is not suitable for aluminum materials.

**Note:**

The C-MAC® video laryngoscope series (840XXX) is considered to be a video endoscope.

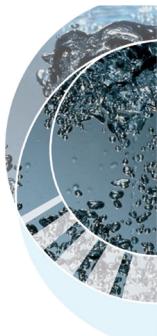

**Note:**

For detailed information on processing, please refer to the respective instructions for use.

**Note:**

Please contact the chemical manufacturer regarding the range of action of the chemical agents used.
